This bill has been referred to the Military Affairs committee.

Leavenworth for several months. Besides his parents he is survived by a younger brother, Howard. The body was brought home for interment.

The following special from Lincoln appeared in the Tuesday's Sioux City Tribune: Judge R. E. Evans, special prosecutor appointed by Governor Neville to go after alleged violators of the Nebraska prohibition law in Dakota county reports that he is obtaining convictions, but indicates that he is somewhat hampered by County Attorney Leamer. Judge Evans in reporting said that Leamer decided to allow him to prosecute the booze cases and then threw a barrier against him by filing objections to his appearance in the cases. Judge Evans complains that this furnishes ammunition to the lawyers for the liquor men. Clippings are enclosed by Evans taken from the North Nebraska Eagle, run by Mell Schmied, who minimizes conditions and claims that Evans is not needed. Editor Schmied is quoted as declaring "that there was no occasion whatever for the appointment of a special prosecutor." The editor besides running a newspaper is one of the employes of the state food commission who happens to be Governor Neville. The editorial is construed in some quarters as a criticism of the governor.

It is evident that more than one kind hearted and industrious maiden has knitted a pair of mismatched socks for some soldier boy - as the following "answer" goes to show -

THE ANSWER. My dear soldier man: Yours of the 16th duly received and I want to assure you I am deeply grieved. To know that your socks do not mate at all. I wanted to send a gift to you. Something hand made and useful, too; I hoped the work would be fine and neat but one was gigantic, the other petite. It happened like this, if you want to know I began the small one, sure and slow; but, like a woman, while you were away I thought about you every day; and pondered your virtues, great and small. Till the first sock would not do at all for the man I pictured you to be; so the second was knit for my Hero. See! As to "where in h-!" did I learn to knit, don't you know - that down there you can't even sit comfortably, much less knit or sew. "The best is interest," say those who know. I blushed to admit I can't even sew. And was vain to attempt a sock with a toe. If you love me still, pray do your bit. Tell me, where in h-! can I learn to knit?

County Agent's Field Notes BY C. R. YOUNG.

A number of people have expressed themselves as being afraid to sow fall alfalfa because of the great number of grasshoppers. These may be controlled by the use of hopperdozers or poisoned bran scattered during the evening or latter part of the afternoon. The disking or plowing of adjoining fields will prevent many young hoppers from hatching and thus reduce the number. Where alfalfa is to be sown this fall, seeding should take place at once; and preferably with a grass drill which assures a uniform depth and all seed getting the moisture. Poison bran may be made as follows: Mix thoroughly 50 pounds bran, 2 pounds Paris green and 6 finely chopped oranges or lemons. Add enough molasses to form a stiff dough. After this has dried, crumble and scatter.

Visits made to a number of orchards where pruning demonstrations were conducted last spring show that trees that were pruned, while, perhaps having no more in many cases, have much larger fruit of better quality. Many of our farmers are buying prepared mineral and worm preventative compounds for hogs. These in most instances are of considerable value, but are sold at an unreasonably high figure. A very satisfactory mixture may be made by the use of the following formula which may be fed in self-feeders: Charcoal, 80 parts; Poke-root, 2 parts; May-apple root, 2 parts; salt, 6 parts. All ingredients should be mixed by weight.

More attention should be paid by hog raisers to keep the sleeping quarters free from dust. Frequent sprinklings of floors with a coal tar solution will be found very satisfactory in improving sanitary conditions. Every effort should be made to prevent mud holes in yards, but where tolerated, dip should be poured over the surface at regular intervals to assist in keeping down disease.
